

- **For industrial applications**
- **Designed for continuous duty**
- **No additional water consumption, filtered water is used in cleaning process**

A vortex fine filter equipped with the fully automatic cleaning nozzle is capable of performing extremely challenging tasks in water recycling or separation plants. This nozzle cleans the filter with a fine water spray. The filter surface is kept clean for long periods without any need for maintenance.

The spraying device for the WFF 100 and WFF 150 vortex fine filters is installed in an external shaft extension above the filter. The spraying device for WFF 300 can be installed directly in the filter housing.

The cleaning nozzle operates fully automatically. In terms of cleaning, the filter is virtually maintenance-free. The service life of the filter is extended, while the consumption of fresh and wastewater and the energy usage associated with the process are minimized.

*Cleaning nozzle for
Vortex Fine Filter WFF 300*

Cleaning Nozzle	Item No.
► WFF 100 cleaning nozzle, pump w/o timer	SC 1000
► WFF 150 cleaning nozzle, pump w/o timer	SC 2000
► WFF 300 cleaning nozzle, pump w/o timer	SC 3000

*Cleaning of water coming from the manufacture of concrete blocks
located in Clermond Ferrand, France*
